## Declaration of Conformity

**FCC** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy, and if it is not installed and used in accordance with the instruction manual, it may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**CE** The products described in this manual complies with all applicable European Union (CE) directives if it has a CE marking. For computer systems to remain CE compliant, only CE-compliant parts may be used. Maintaining CE compliance also requires proper cable and cabling techniques.

## GENERAL INTRODUCTION

### 1.1 Overview

The Vecow TGS-1000 Series is an ultra-compact, stackable AI PC powered by the all-new hybrid architecture Intel® Core™ Ultra Processor. Leveraging three dedicated engines—CPU, GPU, and NPU within a single processor—the TGS-1000 Series delivers AI-enhanced capabilities and is ideal for AI-accelerated processing, AI-assisted video conferencing, AI-ready immersive gameplay, and 4K streaming.

The TGS-1000 Series comprises two models : TGS-1000 and TGS-1500. The former serves as the foundational unit for the TGS-1500. Its modular design facilitates stacking up to four layers of multifunctional expansion boxes, including USB, isolated DIO, COM, LAN, and one layer for MXM docking. With support for up to five 4K displays via HDMI 2.1 and DisplayPort 1.4, and high-speed connectivity provided by one 2.5G LAN and three USB 3.0 ports (two Type-A and one Type-C), the TGS-1000 Series offers efficient AI inference performance at the edge.

The TGS-1000 Series features a compact yet rugged design, supporting an operating temperature range of 0°C to 55°C or 0°C to 45°C, with power input range options of 12V to 24V or 24V.

## 1.2 Features

- Intel® Core™ Ultra processors feature a hybrid CPU/GPU/NPU architecture, enhancing CPU productivity by up to 14%
- Intel® Core™ Ultra processors integrated with maximum 34 TOPS
- Multiple HDMI and DisplayPort display interfaces support max 5 independent displays, up to 4K resolution
- 2 USB 3.2 Gen 2, 1 USB 3.2 Gen 2x2 Type-C with DP, 2 USB 2.0, 1 2.5G LAN with Intel® TSN
- 3 M.2 Socket for storage and expansion
- Modular Design for flexible expansion : USB, Isolated DIO, COM, LAN or 4G/LTE
- DC 12V to 24V Power Input, 0°C to 55°C operation
- Optional VHub One-Stop AIoT Solution Service supports OpenVINO™ toolkit for AI Computing

## 2.2 Front Panel I/O & Functions

### 2.2.1 TGS-1000/TGS-1500 Front I/O & Functions

In Vecow's TGS-1000/1500 series family, all I/O connectors are located on the front panel. Most of the general connections to the computer device, such as TypeC, HDMI, are placed on the front panel.

#### 2.2.1.1 Reset Tact Switch

It is a hardware reset switch. Use this switch to reset the system without power off the system. Press the Reset Switch for a few seconds, then reset will be enabled.

### 2.2.1.2 Power Button

The Power Button is a non-latched switch with dual color LED indications. It indicates power status : S0, S3 and S5. More detail LED indications are listed as follows :

LED Color	Power Status	System Status
Solid Blue	S0	System working
Solid Orange	S3, S5	Suspend to RAM, System off with standby power

To power on TGS-1000/1500, please press the power button and then the blue LED is lightened. To power off the system, you can either command shutdown by OS operation, or just simply press the power button.

If system error, you can just press the power button for 4-seconds to shut down the machine directly. Please do note that a 4-second interval between each 2 power-on/ power-off operation is necessary in normal working status. (For example, once turning off the system, you have to wait for 4 seconds to initiate another power-on operation.)

### 2.2.1.3 PWR & HDD LED Indicator

HDD LED/ Yellow : A hard disk/M.2 M key LED. If the LED is on, it indicates that TGS-1000/1500 storage is functional. If it is off, it indicates that the system's storage is not functional. If it is flashing, it indicates data access activities.

Power LED/ Green : If the LED is solid green, it indicates that the system is powered on.

LED Color	Power Status	System Status
Yellow	HDD	<ul style="list-style-type: none"> <li>On/Off : Storage status, function or not</li> <li>Twinkling : Data transferring</li> </ul>
Green	Power	System power status (on/off)

#### 2.2.1.4 USB Type-C

USB Type-C connector support up to 20GB per second data rate and DisplayPort 1.4a : Up to 3840 x 2160 @ 60Hz by USB Type-C in the front side of TGS-1000/TGS-1500 series.

#### 2.2.1.5 HDMI

Onboard HDMI Port supports DDC channel mode. The connection supports up to 3840 x 2160 resolution at 60Hz.

## 2.3 Rear Panel I/O & Functions

### 2.3.1 TGS-1000/TGS-1500 Rear I/O & Functions

In Vecow's TGS-1000/1500 series family, some of the general connections to the computer device, such as DC-Input power connector, USB2.0/3.2 ports and RJ45 are placed on the rear panel.

#### 2.3.1.1 Power Terminal Block

TGS-1000 supports 12V to 24V DC power input.

TGS-1500 supports 24V DC power input.

Pin No.	Definition	Pin No.	Definition
1	V+	2	V-
3	Earth GND		

### 2.3.1.2 USB2.0

There are 2 USB 2.0 ports available supporting up to 480MB per second data rate in the Rear side of TGS-1000/1500. They are also compliant with the requirements of high speed (HS), full speed (FS) and low speed (LS).

### 2.3.1.3 USB 3.2 Gne2

There are 2 USB 3.2 Gen2 ports connection available supporting up to 10GB per second data rate in the front side of TGS-1000/1500. It also compliant with the requirements of Super Speed (SS), high speed (HS), full speed (FS) and low speed (LS).

### 2.3.1.4 10/100/1000/2500 Mbps Ethernet Port

There is one 8-pin RJ-45 jacks supporting 10/100/1000/2500 Mbps Ethernet connections in the Rear side. LAN is powered by Intel i226-IT Ethernet engine. When both of LANs work in normal status, iAMT function is enabled. Using suitable RJ-45 cable, you can connect the system to a computer, or to any other devices with Ethernet connection, for example, a hub or a switch. Moreover, both of LANs support Wake on LAN and Pre-boot functions.

Connetor	LAN Chip	Function
LAN1	Intel I226	RJ45(10/100/1000/2500Mbps)

Using suitable RJ-45 cable, you can connect TGS-1000/1500 system to a computer or to any other devices with Ethernet connection, for example, a hub or a switch. Moreover, LAN1 support Wake on LAN and Pre-boot functions. The pinouts of LAN1 is listed as follow :

Pin No.	10/100Mbps	1000Mbps	2500Mbps
1	E_TX+	MDI0_P	MDI0_P
2	E_TX-	MDI0_N	MDI0_N
3	E_RX+	MDI1_P	MDI1_P
4	-----	MDI2_P	MDI2_P
5	-----	MDI2_N	MDI2_N
6	E_RX-	MDI1_N	MDI1_N
7	-----	MDI3_P	MDI3_P
8	-----	MDI3_N	MDI3_N

Each LAN port is supported by standard RJ-45 connector with LED indicators to present Active/Link/Speed status of the connection. The LED indicator on the left bottom corner lightens in solid green when the cable is properly connected to a 100 Mbps Ethernet network, and it lightens in solid orange when the cable is properly connected to a 1000 Mbps Ethernet network. The right LED will keep twinkling/off when Ethernet data packets are being transmitted or received.

### 2.3.1.5 Audio Jack

There are 2 audio connectors, Mic-in and Line-out, in the Rear side of TGS-1000/1500. Onboard Realtek ALC888 audio codec supports 7.1 channel HD audio and fully complies with Intel® High Definition Audio (Azalia) specifications. To utilize the audio function in Windows platform, you need to install corresponding drivers for Realtek ALC888 codec.

### 2.5.1 Front View of TGS-1000/1500 Main Board with Jumper Location

The figure below is the top view of the TGS-1000/1500 main board. It shows the location of the jumpers.

You may configure your card to match the needs of your application by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper, you connect the pins with the clip. To “open” a jumper, you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2, and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

## SYSTEM SETUP

### 3.1 Installing DDR5 SO-DIMM Module

**Step 1** Remove four flat head M3x4L screws and bottom cover.

**Step 2** Install DDR5 SO-DIMM.

**Step 3** Remove the release liner from the bottom cover.

**Step 4** Install four flat head M3x4L screws to lock bottom cover.

## 3.2 Installing M.2

### 3.2.1 Installing M.2 Key M 2280

**Step 1** Remove four flat head M3x4L screws and bottom cover.

**Step 2** Install thermal pad (Vecow PN: 53-4031742-203, please refer to packing list) and remove the release liners from both sides of thermal pads and adhere them to the surface of the PCBA.

**Step 3** Install M.2 module (Key M 2280) and fasten I head M3x4L screw.

**Step 4** Remove the release liner from the bottom cover.

**Step 5** Install four flat head M3x4L screws to lock bottom cover.

### 3.2.2 Installing M.2 Key M 2242

**Step 1** Remove four flat head M3x4L screws and bottom cover.

**Step 2** Install thermal pad (Vecow PN: 53-4031942-203, please refer to packing list) and remove the release liners from both sides of thermal pads and adhere them to the surface of the PCBA.

**Step 3** Install M.2 module (Key M 2242) and fasten I head.

**Step 4** Remove the release liner from the bottom cover.

**Step 5** Install four flat head M3x4L screws to lock bottom cover.

### 3.2.3 Installing M.2 Key E 2230

**Step 1** Remove four flat head M3x4L screws and top cover.

**Step 2** Remove three I head M2.5x3L screws and fan connector, then take out the fan.

**Step 3** Remove release liner.

**Step 4** Install M.2 module (Key E 2230) and fasten I head M3x4L screw.

**Step 5** Install the three I head M2.5x3L screws and the fan connector onto the heatsink.

**Step 6** Install four flat head M3x4L screws and top cover.

### 3.3 Installing Antenna Cable

**Step 1** Refer to steps 1 through 4 for installing the M.2 Key E 2230.

**Step 2** Remove hole plug.

**Step 3** Install SMA cable , and fasten washer and nut.

**Step 4** Connect the antenna connector to the M.2 Key E.

**Step 5** Install the three I head M2.5x3L screws and the fan connector onto the heatsink.

**Step 6** Install four flat head M3x4L screws and top cover.

## 3.4 Dock Your TGS-100 Series

### 3.4.1 Docking TGS-100 Series

**Step 1** Remove four flat head M3x4L screws and bottom cover of TGS-1000.

**Step 2** Remove five flat head M3x4L screws and bottom cover of TGS-100.

**Step 3** Replace the thermal pad on the bottom cover from TGS-1000 to TGS-100.

Before replacement

**Step 4** Install the TGS-100 bottom cover onto TGS-1000 using four flat head M3x4L screws.

**Step 5** Install the TGS-1000 bottom cover onto the TGS-100 using five flat head M3x4L screws.

**Step 6** Remove hole plug.

**Step 7** Install four copper pillars(M3x19.5L) on the TGS-1000.

**Step 8** Rotate 180 degrees to change the perspective.

Assemble the TGS-1000 and TGS-100 using I Head(M3x4L)screws.

For the following models, if you want to assemble them with the TGS-1000, please refer to the TGS-1000 Docking TGS-101 assembly instructions.

### 3.4.2 Docking TGS-103

**Step 1** Remove four flat head M3x4L screws and bottom cover of TGS-1000.

**Step 2** Remove five flat head M3x4L screws and bottom cover of TGS-103.

**Step 3** Replace the thermal pad on the bottom cover from TGS-1000 to TGS-103.

Before replacement

TGS-1000 Bottom cover

TGS-103 Bottom cover

After replacement

TGS-1000 Bottom cover

**Step 4** Install the TGS-103 bottom cover onto TGS-1000 using four flat head M3x4L screws.

**Step 5** Install the TGS-1000 bottom cover onto the TGS-103 using five flat head M3x4L screws.

**Step 6** Remove hole plug.

**Step 7** Install four copper pillars(M3x35L) on the TGS-1000.

**Step 8** Rotate 180 degrees to change the perspective.

Install the TGS-1000 and TGS-103 together with four I head M3x20.5L screws.

## 3.5 Mounting Your TGS-1000 Series

### 3.5.1 TGS-1000 Wall mount

**Step 1** Installing Wall Mount Bracket with the four flat head M3x4L screws.

### 3.5.2 TGS-1000 VESA mount

**Step 1** Mount the VESA on the wall; the screw specification is M4x10L, with a head thickness of less than 7mm.

**Step 2** Install the TGS-1000 onto the VESA mount with two Phillips M3x4L.

### 3.5.3 TGS-1500 Wall mount

**Step 1** Installing Wall Mount Bracket with the four flat head M3x4L screws.

### 3.5.4 TGS-1500 VESA mount

**Step 1** Mount the VESA on the wall; the screw specification is M4x10L, with a head thickness of less than 7mm.

**Step 2** Install the TGS-1500 onto the VESA mount with two Phillips M3x4L.

### 3.5.5 TGS-100 Wall mount

**Step 1** Installing Wall Mount Bracket with the four flat head M3x4L screws.

### 3.5.6 TGS-100 VESA mount

**Step 1** Mount the VESA on the wall; the screw specification is M4x10L, with a head thickness of less than 7mm.

**Step 2** Install the TGS-100 onto the VESA mount with two Phillips M3x4L.

Return :

TRUE (1) : Success.

FALSE (0) : Fail (Initial error, or setup 0, or hardware problem).

### **BOOL cancel\_WDT()**

Cancel watchdog timer.

Return :

TRUE (1) : Success.

FALSE (0) : Fail (Initial error or hardware problem).

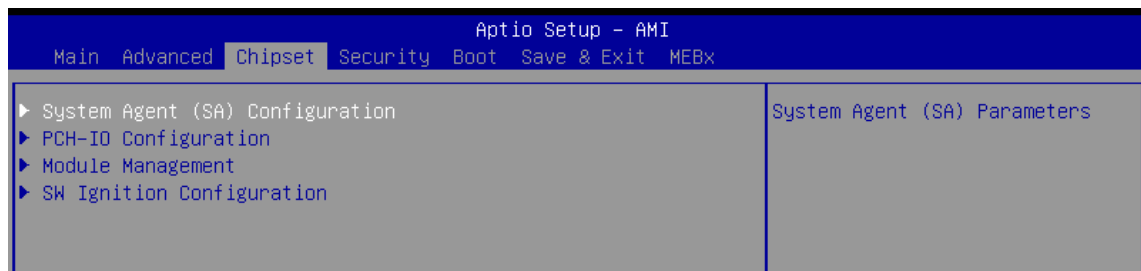

## APPENDIX C : RAID Functions

### C.1.1 VMD Controller for RAID

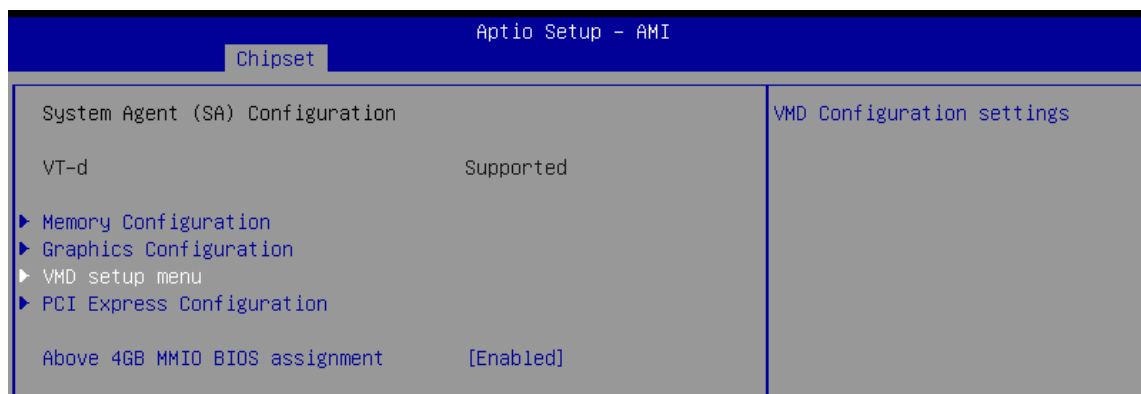

Please set Enable VMD controller as Enabled on the BIOS menu.

Chipset → System Agent (SA) Configuration → VMD setup menu → Enable VMD controller → Enabled → Save Changes and Reset.

1. Select System Agent (SA) Configuration.

2. Select the VMD setup menu.

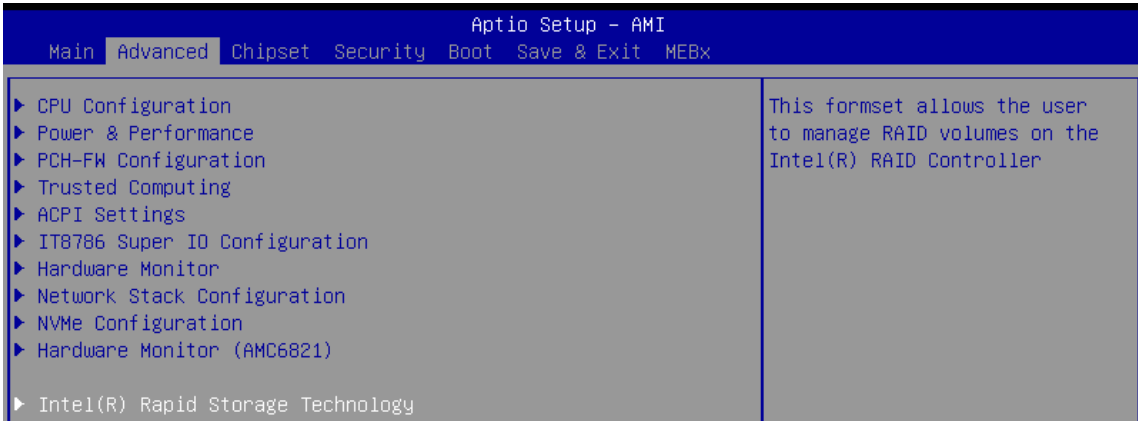

3. Enabled VMD controller. Then Save Changes and Reset.

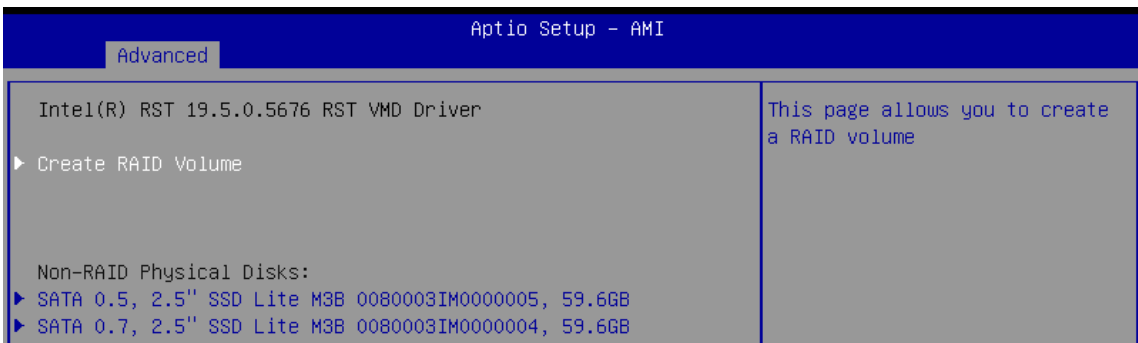

## C.1.2 UEFI Mode for RAID

1. Into BIOS menu again, select Intel(R) Rapid Storage Technology on BIOS menu.  
Advanced → Intel(R) Rapid Storage Technology.

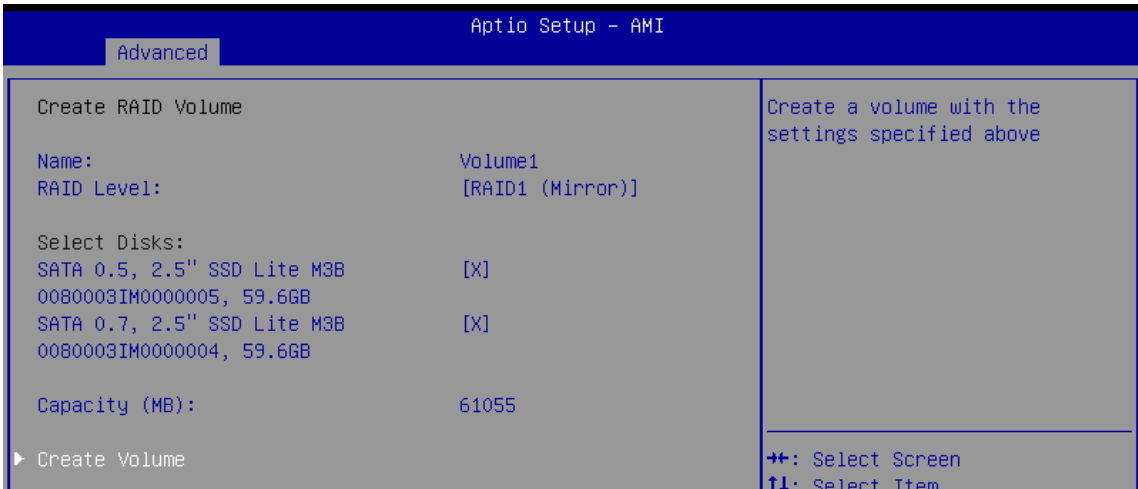

Note : Since each model differs, the following example screenshots are for reference only.)

2. Select Create RAID Volume on the BIOS menu.  
This system features 1 M.2 Key M Socket (2280, PCIe 4.0 x4) and 1 M.2 Key M Socket (2242, PCIe 4.0 x4) support NVME storage. Please note. Storage device M.2 and SATA cannot be mixed to create a RAID Volume.

Note : Since each model differs, the following example screenshots are for reference only.)

3. Select disks to create RAID Volume, then Save Changes and Reset to install OS.

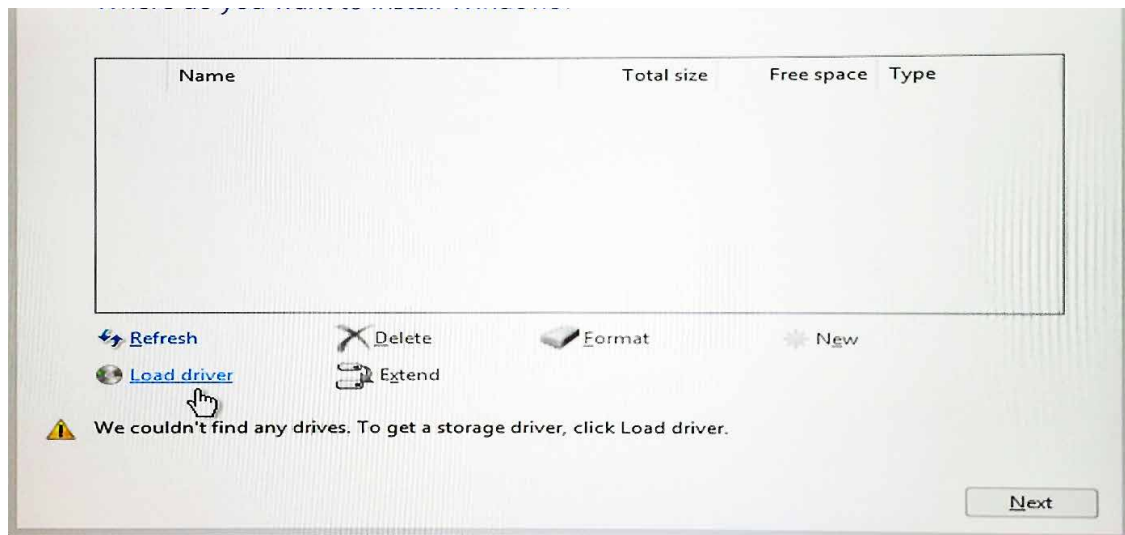

Note : Since each model differs, the following example screenshots are for reference only.)

## C.2 OS Installation

We used SATA HDD for Windows 10 OS installation as an example.

Please note. After enabling the VMD controller, the IRST driver needs to be loaded first before it can read the hard disk.

You can find the latest information and software directly from Intel's website.

[http://www.intel.com/p/en\\_US/support/highlights/chpsts/imsm](http://www.intel.com/p/en_US/support/highlights/chpsts/imsm)

Download the driver "SetupRST.exe" and decompress it.

You can refer to Intel's official teaching.

<https://www.intel.com/content/www/us/en/support/articles/000094664/technologies/intel-rapid-storage-technology-intel-rst.html>

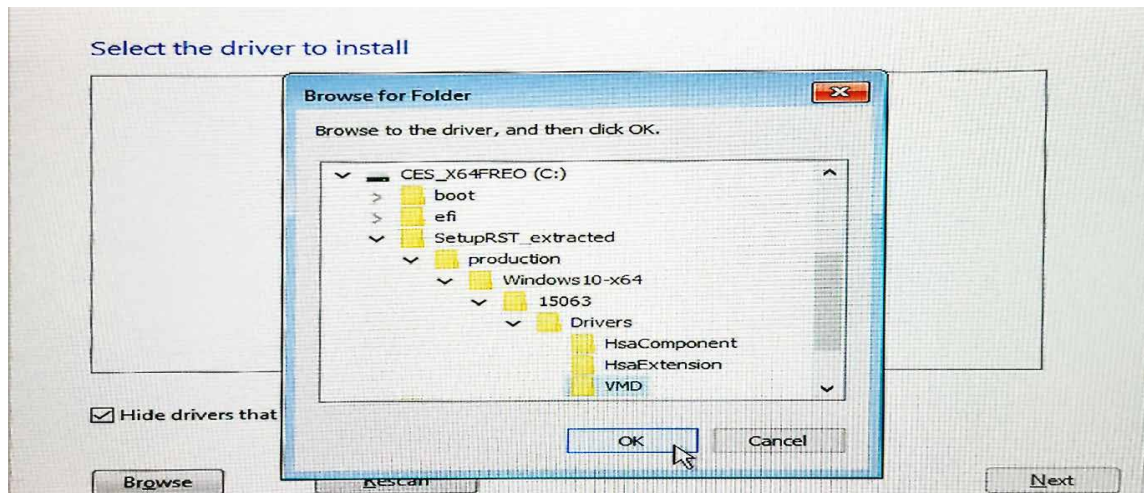

Open Windows PowerShell or CMD and navigate to the location of the SetupRST.exe file.

Enter the following command to extract :

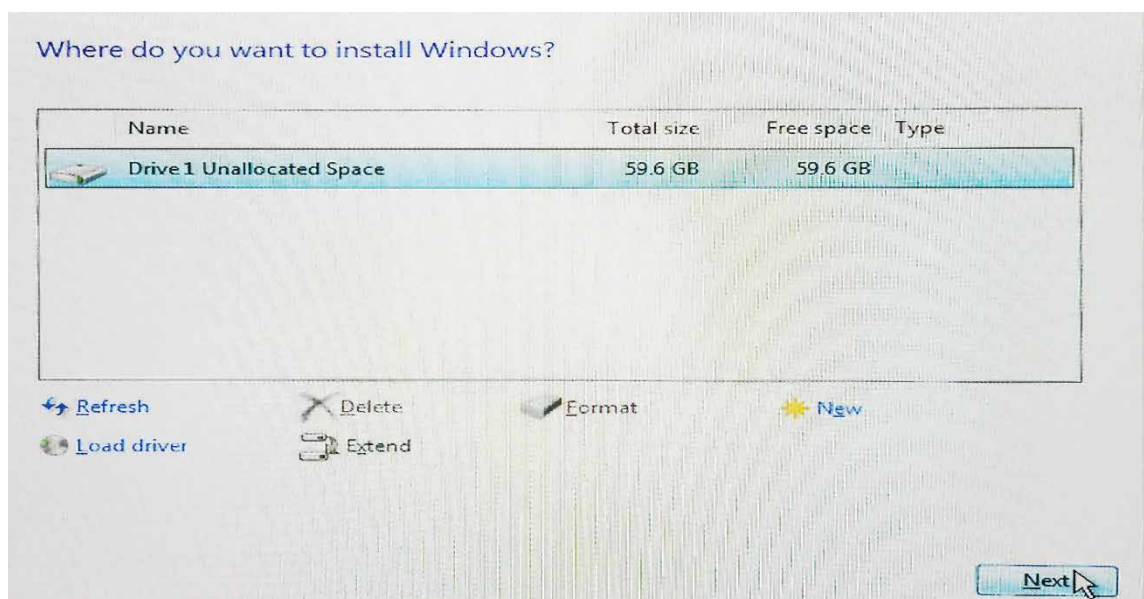

**./SetupRST.exe -extractdrivers SetupRST\_extracted.**

After extraction, a "SetupRST\_extracted " folder will be created, and then the folder will be put on the USB drive used for installing Windows.

Load the drivers and install them during the Windows installation.

Then you can select the hard drive and install the OS.

## C.3 To Install All Device Drivers of the System

The instructions are as follows:

1. Install the Chipset driver
2. Install VGA driver
3. Install ME driver (if available)
4. Install Network driver
5. Install Audio driver
6. Install the NPU driver
7. Install the Intel SerialIO driver

## C.4 To Install “Intel Rapid Storage Technology” driver

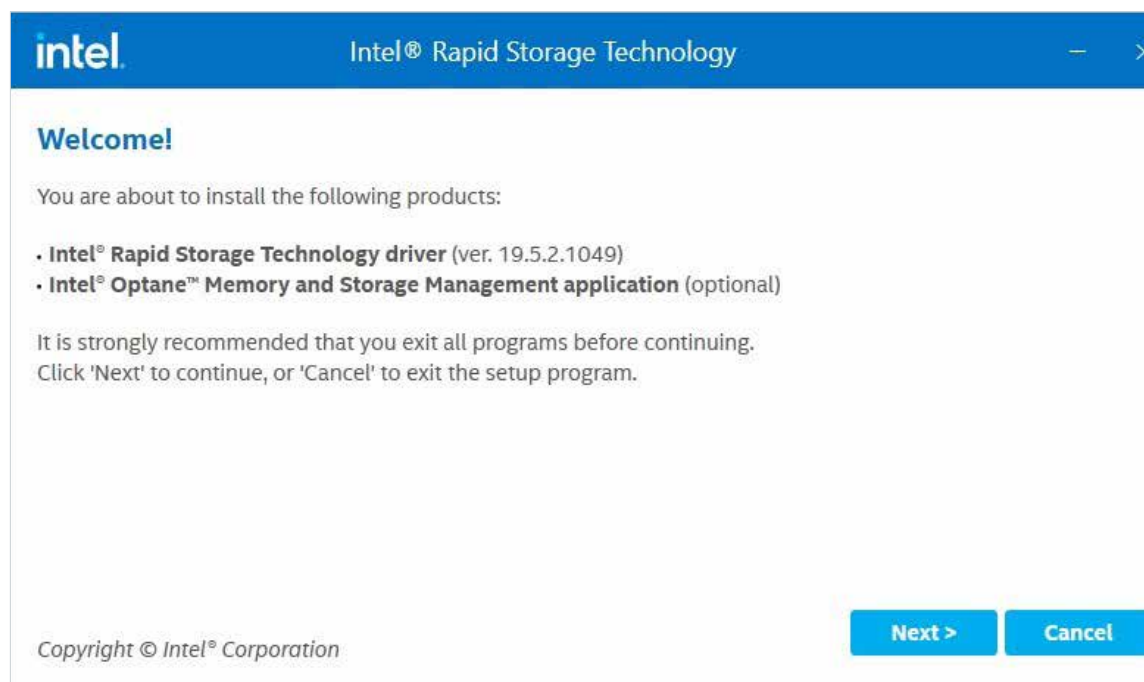

You can get the software from the driver CD.

Please note: Based on environmental sustainability and ESG principles, we no longer provide driver CDs with shipments and encourage customers to download the product drivers directly from our website.

Also, you can find the latest information and software directly from Intel's website.

[http://www.intel.com/p/en\\_US/support/highlights/chpsts/imsm](http://www.intel.com/p/en_US/support/highlights/chpsts/imsm)

Install "SetupRST.exe"

The RAID environment has been done when you completed the steps above. At this point, the basic RAID Volume setup steps have concluded.

## C.5 Manage RAID Volume on “Intel® Optane™ Memory and Storage Management” Software

You can download "Intel® Optane™ Memory and Storage Management" to manage and create RAID Volumes.

You can find it at Microsoft Store.

<https://apps.microsoft.com/detail/9MZNG5HZWZ1T?activetab=pivot%3Aoverviewtab&hl=en-us&gl=US>

After installation, the created RAID Volume will be displayed here.

The screenshot displays the Intel Optane Memory and Storage Management application window. The interface includes a left-hand navigation pane with options: Manage, Create RAID Volume, Intel® Optane™ Memory, Performance, Settings, and About. The main content area is titled "Status" and shows a green checkmark indicating the storage system is functioning normally. Below this is the "Storage System View" section, which lists components: SATA\_Array\_0000, two SATA SSD (60 GB) drives, and two internal empty ports (4 and 6). A blue box labeled "Volume1" is overlaid on the SSDs, indicating a RAID 1 configuration. A "Rescan" button is located at the bottom right of the main area. On the right side, a detailed "Volume1" properties panel is open, showing the following information: Status: Normal, System volume: Yes, Initialized: No, Type: RAID 1, Size: 60 GB, Write-cache buffer flushing: Enabled, Cache mode: Off, Data stripe size: 64 KB, Physical sector size: 512 Bytes, and Logical sector size: 512 Bytes. Links for "Rename volume", "Initialize", "Change type", and "Modify Cache Mode" are also present.

## C.6 To Create RAID Volume on “Intel® Optane™ Memory and Storage Management” Software

You can connect additional SATA devices to build RAID Volumes (If available), and use "Intel® Optane™ Memory and Storage Management" Software for management.

The screenshot displays the 'Create RAID Volume' wizard within the Intel Optane Memory and Storage Management application. The interface features a blue header bar with the Intel logo and the application name. A left-hand navigation pane contains several menu items: 'Manage' (with a wrench icon), 'Create RAID Volume' (with a plus icon and highlighted in blue), 'Intel® Optane™ Memory' (with a circular arrow icon), 'Performance' (with a line graph icon), 'Settings' (with a gear icon), and 'About' (with an information icon). The main content area is titled 'Create RAID Volume' and includes a 'Name:' label followed by a text input field containing 'volume\_0001'. Below this, there are two sections of radio button options. The first section, 'Select controller:', offers 'PCIe' and 'SATA' options. The second section, 'Select volume type:', offers four options: 'Optimized disk performance (RAID 0)', 'Real-time data protection (RAID 1)', 'Efficient data hosting and protection (RAID 5)', and 'Balanced performance and data protection (RAID 10)'. A 'Next' button is positioned at the bottom right of the main content area.

## APPENDIX F : Selection and Use Guide of TGS-100

1. TGS-101 (GPIO) and TGS-102 (DIO) cannot be jointly used and can only be installed at the first expansion layer.

O

TGS-101/102 at first layer

X

TGS-101/102 at second layer

2. For TGS-1000, can support up to 4 expansion layer.

3. For TGS-1500, can support up to 2 additional expansion layer.  
(excludes MXM layer).
